

## XSM for Windows install guide

This documentation applies to Windows 95, 98, NT.4, NT.2000 (Serveur or Workstation), XP

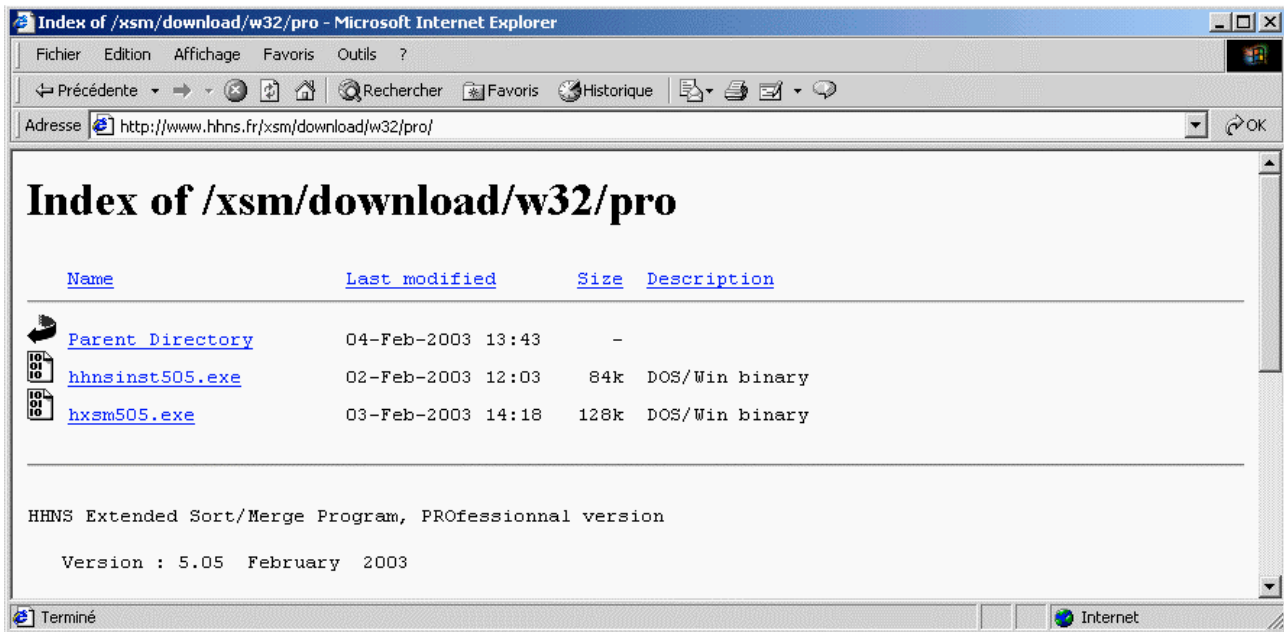

### 1) Download

From your workstation, connect with your Internet browser to site :

<http://www.hhns.fr/xsm/en/xsmdwld.php>

and chose XSM version and platform

Index shows (in this example, version 5.05 for Windows) :

Download the 2 files hhnsinst505.exe et hxsm505.exe on your windows local disk, and put them in a directory included in the PATH system variable.

(open a command prompt and type PATH to know the value)

if you don't know where to put XSM, try C:\WINNT : XSM install/uninstall is safe : just delete the files and you're done ; nothing witten in Registry

## 2) Software Key Activation

Open a command prompt and change-dir to the directory containing XSM modules.

Now type :

```
hhnsinst505 hxsm505.exe
```

(if version is not 5.05, replace « 505 » by correct version)

Result should be :

```
Program 'hxsm505' successfully installed
```

Now run XSM for the first time, without parameters :

```
./hxsm505
```

XSM shows its initial key (here in bold) :

Thanks for testing the 'HHNS Sort/Merge Program PRO - V.5' Program  
If you wish to register for the 'HHNS Sort/Merge Program PRO - V.5' Product on  
THIS machine,  
just contact HHNS with the following registration key :

**0024-0505-9268-G**

For further informations : <http://www.hhns.fr>, email:support@hhns.fr

Please press Enter to continue

Please note carefully this key and connect to Extranet site :

<http://www.hhns.fr/extranet/xsm/>

log-in using your account info (code+password).

If you don't have account, just contact-us by mail [support@hhns.fr](mailto:support@hhns.fr) or create it on the fly : account codes will be sent immediately by email.

Now, click on « generate a product key » and fill-in necessary fields :

| Produit | Version | O.S.   | Type clé   | Clé initiale | Le         | Expiration          |
|---------|---------|--------|------------|--------------|------------|---------------------|
| XSM     | 5.03    | AIX V4 | Production |              | 14/01/2003 | mois :-> 14/02/2003 |

Hostname:

Commentaire:

Retour en liste    Reset    Générer

In our example (Windows 5.05) :

Version : 5.05

OS : Windows 2000

Type : Evaluation

Clé initiale : the one you carefully noted ...

Expiration : 1 month (definitive keys are sent upon licence purchase)

Hostname : ( to get it, type hostname )

Now click on « Generate » :

The generation page shows generated key and command to type :

```
hhnsinst505 hxsm505 1234-5678-9012-3456-A
```

Now change-dir to directory containing the modules, type this command, and XSM is installed !

XSM user guide is available on site <http://www.hhns.fr/xsm/en/xsmqref.php>

## TROUBLESHOOTING :

If set-up fails, please check this list :

1. Are you sure you transferred/moved/copied in binary ?
2. Are you sure the command prompt was positionned in the directory containing the modules ?
3. Did you rename the binaries ? if so did you type the correct file names ?

Syntax :

```
Install_module target_module
```

Example :

```
hhnsinst505 hxsm505.exe
```

4. Did you use equal versions for install\_module and target\_module ?

Example :

```
hhnsinst505 hxsm505.exe will work fine !
```

```
hhnsinst443 hxsm505.exe will not work !
```

If you have downloaded different versions, please search your disk(s) to check another old version is not in another directory specified in PATH, wich could cause confusion.

5. Do you have Read/Write rights on target\_module ?  
Try to copy/delete or rename hxsm505.exe to check
